ValueCockpit

This is a special online testing process developed by IHH that places a special emphasis on the uniqueness of the human being and captures and depicts it through a rating process. It shows the values as a person in general and how these values and abilities are used in the work environment and deviate from the average.

The procedure: It differs from conventional test methods, because here the values of a human are measured. Other methods only measure the behavior or setting. But to recognize the identity of man, one should know his values. WertCockpit measures this in terms of capabilities and how they are used purposefully.

Values Cockpit is based on the method of Robert S. Hartman - Hartman Value Profile (HVP) - it is an objective method that is influenced neither by the test situation nor by the test leader or the interpretation of the result. Consistent and consistent terms make the result reliable and of high validity.

Further information on Robert S. Hartman can be found at: www.hartmaninstitute.org

IHH, the operator of WertCockpit, is a member of the Hartman Institute.

Fields of application:

- personality analysis
- Personality development
- career and career counseling
- Coaching
- Personnel selection
- Personnel development
